TITLE: A pneumatic relay. Class 62, No. 183605

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 13, 1966, 146

TOPIC TAGS: pneumatic device, pneumatic control, valve

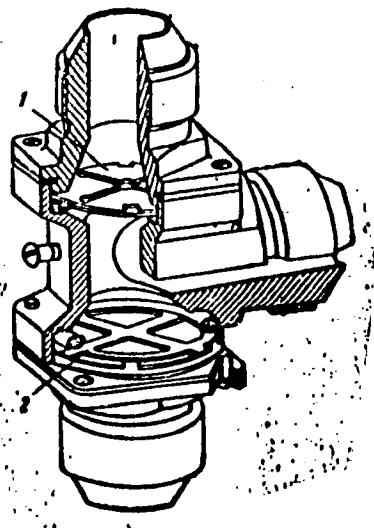

ABSTRACT: This Author Certificate presents a pneumatic relay for switching in the duct and the ejector. The casing of the relay contains inlet and outlet pipes and valves (see Fig. 1). To reduce the hydraulic resistance and to improve the productivity, the valves are elastic and have the form of petal-like sectors mounted on saddles fixed in the casing.

Methods of forecasting the population of Microtus arvalis Pall. (field mouse) and the biological cycles of this animal were studied from 1945 to 1949. Southern part of Moscow Oblast served as exptl area. Conclusions reached were similar to those reported from other regions of the USSR. Conditions that affect the birth rate of Microtus arvalis are warm, dry weather in spring and autumn and delayed harvesting. Increase in the number of Microtus arvalis always follows a year of increase in their birth rate and is followed by epizootics. An approved pest control system

Title : Elementary reservoirs of infection in natural reservoirs of diseases

Periodical : Zhur. mikro. epid. i immun. 4, 15-20, Apr 1955

Abstract : Ye. N. Pavlovskiy's concept of an "elementary reservoir" of an infectious disease is defined and explained. Examples of such reservoirs in Moscow Oblast and Yaroslavskaya Oblast are given. Reservoirs of tularemia, plague, non-icteric leptospirosis, mosquito-borne encephalitis, erysipeloid, and other tick-borne encephalitides and rickettsioses are discussed. The etiological relationships between the vectors, hosts, and causative organisms of certain of these diseases are reviewed. The works of 17 Soviet scientists in this field are referred to in the text. Sixteen Soviet references are cited.

Yezhny Akademii Nauk SSSR, 1959, No. 4, pp. 121-125 (RMN)

**ABSTRACT:** The All-Union Conference held by the Institute of Ecological Problems (Physiological Institute) in Leningrad between January 2nd and January 11th concluded its work. Altogether 20 reports were delivered, each with three parts: short "General Trends of Research", "Special Problems of Ecological Factors in Animal Physiology", and "Ecological Results in Mammals". In the "General Trends of Research" section, the following topics were discussed: 1. The Comparative Endocrinology of Vertebrates; 2. The Comparative Biology of Animal Physiology; 3. The Survival of Non-Vertebrates (Parasites and Mammals); 4. The Universality of Physiological Features in Mammals and Man; 5. Comparative Ontogenetic Characteristics of Several Parthenocarpiotic Species of Mammals; 6. The Internal Structure of Rabbits and Sheep in Connection With Semen Quality and A. A. Shchitova's report on Physiological Changes in Semen of Various Mammals; 7. The Dependence of Varieties of Species of Snake on Specific Conditions of Life; 8. The Effect of Various Factors on the Behavior and Survival of Mammals (including the Case of Irradiation and Flooding of the Irrigated Regions); 9. The Problem of the Internal Structure of Mammals; 10. The Problem of the Internal Structure of Mammals (including the Case of Irradiation and Flooding of the Irrigated Regions); 11. The Effect of Various Factors on the Internal Structure of Mammals; 12. The Dependence of the Internal Structure of Mammals on Morphological Variability of the Population of Animals Under the Effect of Ecological Conditions; 13. The Effect of Various Factors on the Internal Structure of Mammals; 14. The Effect of Various Factors on the Internal Structure of Mammals; 15. The Effect of Various Factors on the Internal Structure of Mammals; 16. The Effect of Various Factors on the Internal Structure of Mammals; 17. The Effect of Various Factors on the Internal Structure of Mammals; 18. The Effect of Various Factors on the Internal Structure of Mammals; 19. The Effect of Various Factors on the Internal Structure of Mammals; 20. The Effect of Various Factors on the Internal Structure of Mammals.

TITLE: Analysis of the Operation of Regenerators for Apparatus  
with 7-contact Division (Analiz raboty regeneratorov dlya  
apparatov s 7-kontaktnym deleniyem) (Letter to the Editor)

PERIODICAL: Elektrosvyaz', 1958, Nr 3, pp 67 - 69 (USSR)

ABSTRACT: The analysis of the working of telegraph signal  
regenerators under unfavourable conditions is developed with  
reference to a previous article (Elektrosvyaz', 1956, Nr 6).  
Features of mechanical and electronic regenerators (one-way and  
two-way) are considered; the main features of the two-way  
translator being that it is in two parts: one for reception  
and storage and the other for transmission of the signals. As  
an example, the regenerator RS-13 is analysed (Vestnik Svyaz',  
1952, Nr 11). Operation of the circuit (Fig.1) is described.  
There are 6 figures.

TITLE: An Electronic Adapter to Permit an Oscillograph to be  
Used as a Telegraph Signal Distortion Gage (Elektronnaya  
pristavka pozvol'yayushchaya ispol'zovat' oscillograf v  
kachestve izmeritelya iskazheniy telegrafnykh signalov)

PERIODICAL: Vestnik svyazi, 1958, Nr 9, p 10 (USSR)

ABSTRACT: L.I. Zubovskiy, an engineer at the Central Telegraph, de-  
signed an oscillograph adapter for the Department of Te-  
legraphy at MEIS, for use as a telegraph signal distor-  
tion gage. The device consists of an RC oscillator,  
blink modulator and power pack and has an original input  
arrangement. The double telegraph signals are differen-  
tiated and transformed into short pulses which momentari-  
ly lock the blink modulator tube, thus giving rise to a  
full plate voltage at the terminal of the oscillograph,  
and producing a bright spot on the screen. Normally the  
spots are superimposed but when distortion of the signal  
occurs they fan out. The oscillator generates a frequency  
of 35-65c, corresponding to the reception of signals with

Card 1/2

An Electronic Adapter to Permit an Oscillograph to be Used as a Telegraph Signal Distortion Gage

SOV-111-58-9-8/30

a speed of 35-65 baud. An electronic pick up, using transistors, is to be designed. Lecturer V.S. Ptitsyn has designed and assembled a receiver for such a pick-up. The oscillator frequency will be 50c, taken from the ac grid, which will permit the set to receive signals at 50 baud. There is 1 circuit diagram.

TITLE: The Search for Methods Which Increase the Precision of Telegraph Communication (Isket' sposoby, povyshushchie tochnost' peredachi telegrafnykh soobshcheniy)

PERIODICAL: Vestnik svyazi, 1958, Nr 12, p 3 (USSR)

ABSTRACT: Modern computers speed up scientific work, statistical and accounting operations. It is advisable not to install computers at individual plants, but to concentrate them in computer centers. Installations will then transmit their problems by code telegrams to the center, and will receive the results in the same way. This will require very high precision telegraph equipment working. The available TOR apparatus has a high reliability but it does not guarantee a 100% accuracy. The author has the opinion that it is advisable to develop telegraph apparatus based on the TOR equipment but using only a five element code.
